FILM PROCESSOR TAS

Order no.: TAS-JOBO-DRUM

HEILAND VISION GERMANY GMBH

The device simultaneously turns and tilts the film developing tank and adheres to the necessary phases of standstill. This creates a movement similar to manual development. Agitation is however controlled much more precisely. Together with the integrated calculator for temperature compensation your negatives will be developed reproducibly and conveniently in the future.

You can directly transfer already determined parameters for film development; programming only consists of entering the data. Several individual development modes are supported by small external memory modules.

If you temporarily do not need the TAS, you can also easily fit it into a shelf. The device is easily transportable and can even be powered by a car battery.

VERSION FOR JOBO EXPERT DRUM TANK SYSTEM

Use your Jobo Expert Drum tank series 30xx to develop sheet films. That tank system is useful for develop films up to the size of 8x10 inch.

That TAS version rotates the tank only!

BENEFITS FOR THE USER

- Better acutance of the negatives due to a precise controlled process of agitation
- Noticeably cheaper than classic rotational film processors
- Developing tanks already at hand can be used
- Reproducible development results
- Development of sheet films up to 8x10 inch
- Small footprint
- Supports multiple users due to removable storage
- Compensates total development time depending on programmed temperature
- Transportable – can also be used in campers with 12 V supply
- Solid, long-living metal construction
